Thanks for following through the instruction

Strike is always my favorite Gundam with its own iconic look that blends with the original design, that's why this project was always in my "have to finish" list. Can't believe I'm finishing the building instruction for real.

Trying to capture the iconic appearance, gimmick, articulation... makes this become my most time-consuming project. Being Gunpla builder, I always enjoy their features like sliding armor, open hatch, posability..., delivering them using Lego parts is quite challenging but through that I discovered more technics and prove that I could surpass my previous MOCs.

The work base on the model kit versions of itself. First of all, the Perfect Grade Strike Gundam, released long time ago but still an astounding design till this day. Next is the Metal Build, I choose to follow the sharp edge style, also the gimmick of Aile Strike Backpack (will come later). Last but not least, the original design in anime to make sure I keep the spirit of what makes this Mobile Suit iconic.

I hope you have a nice experience building and playing with this project.

I'll keep updating on my new projects in Youtube channel, Facebook, Twitter, DevianArt under the name "Demon1408".

Thank you !
